Expanding the Possibilities of Neurorehabilitation

Introducing **Mobili-T®**: sEMG Biofeedback for Dysphagia

Portable, affordable, and customizable. “See” swallowing muscle activity as it happens. Without all the bulk and wires, Mobili-T delivers all the benefits you have been looking for in dysphagia treatment: efficiency, adherence, and trackable results.

BENEFITS

- ⇒ **MONITOR REMOTELY:** Sending patients home with swallowing exercises? Move beyond guessing with pen and paper: Mobili-T directly monitors their progress and customizes their program at the click of a button and an easy to use app.
- ⇒ **VISUAL FEEDBACK:** Muscle excitation is captured by small sensors (the size of small buttons) that stick on the surface of the skin using adhesive.
- ⇒ **FLEXIBLE:** Can be used virtually anywhere... in clinic, residential treatment settings, at home or on the go.

See more patients, track their progress and gather data with the benefit of increased billing.

Patients complete exercises between clinician visits benefitting both the clinician’s and the patient’s schedules.

RESULTS

- ⇒ Reduce length of stay
- ⇒ Reduce hospital readmission
- ⇒ Improve patient’s quality of life
- ⇒ Improve swallowing efficiency

Expand treatment options for your patients
