

Introducing **Mobili-T®: sEMG Biofeedback for Dysphagia**

Portable, affordable, and customizable. “See” swallowing muscle activity as it happens.

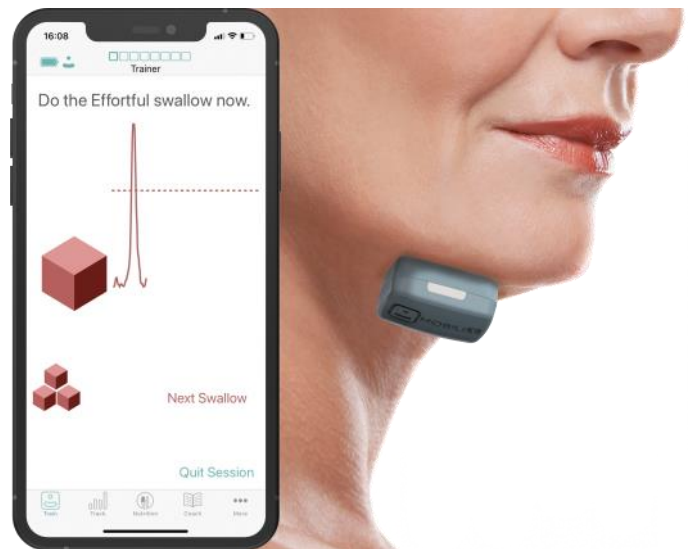

Without all the bulk and wires, Mobili-T surface electromyography (sEMG)

delivers all the benefits you have been looking for in

dysphagia treatment: efficiency, adherence, and trackable results.

BENEFITS

- ⇒ **MONITOR REMOTELY:** Sending patients home with swallowing exercises? Move beyond guessing with pen and paper: Mobili-T directly monitors their progress and customizes their program at the click of a button plus an easy to use app guides the patient through exercises. Increases adherence to 72%
- ⇒ **VISUAL FEEDBACK:** Muscle excitation is captured by small sensors (the size of small buttons) that stick on the surface of the skin using an adhesive patch.
- ⇒ **FLEXIBLE:** Can be used virtually anywhere... acute, inpatient, outpatient clinic, residential treatment settings, at home, or on the go.

- ◇ **Start treating faster:** No certification needed PLUS easier and quicker to set up than other sEMG programs like VitalStim Plus
- ◇ **Less expensive:** Less cost per treatment for adhesives versus electrodes
- ◇ **Assessment and educational tool-** includes a choice of two different programs within the app
- ◇ **See more patients:** track their progress and gather data with the benefit of increased remote billing in outpatient and home health settings
- ◇ **Outpatient/Home Health clients complete exercises between clinician visits** - benefits both the clinician's and the patient's schedules
- ◇ **Patients can purchase devices:** facility not required to have their own device for patients to purchase a device

RESULTS

- ⇒ Reduce length of stay
- ⇒ Reduce hospital readmission
- ⇒ Improve patient's quality of life
- ⇒ Improve swallowing efficiency
- ⇒ Automatic data collection
